In the Claims:

Cancel claims 2, 5, 10, 15, 17, 19, 21, 32 and 34-36 without prejudice or disclaimer and amend claims 1, 6-8, 16, 18, 20 and 22-27 to read as follows:

- 1. (Amended) A laminate film comprising:
- a polymer core layer;
- a resin layer comprising polypropylene disposed on a surface of said polymer layer; and a metal layer deposited on a surface of said resin layer;
- wherein the laminate film has metal adhesion of 2 or more;

wherein the resin layer comprises an additive that enhances adhesion between the resin layer and the metal layer selected from the group consisting of a crystalline polyethylene wax, a branched ethylene copolymer wax, a hydroxyl-terminated polyethylene wax and a carboxyl-terminated polyethylene wax; and

wherein the laminate film has O_2TR of 100 cc/m²/day or less at $38^{\circ}C$ and 0% relative humidity as measured on a 15 μ m laminate film elongated 9% in the machine direction.

- 6. (Amended) The laminate film of claim 1, wherein said resin layer has a thickness of about 0.2 to $5.0 \ \mu m$.
- 7. (Amended) The laminate film of claim 1, wherein said additive is about 1 to 15 percent by weight of said resin layer.
- 8. (Amended) The laminate film of claim 1, wherein said resin layer further comprises about 10 to 10,000 ppm of an antiblock additive.
- 16. (Amended) The laminate film of claim 1, wherein said crystalline polyethylene wax has a molecular weight of 400 3000, a melting point of 80 132°C by ASTM D127, viscosity at 149°C of 2 170 centipoise by ASTM D3236 or viscosity at 99°C of 40 60 SSU by ASTM D88, needle penetration at 25°C of 15 0.0 dmm by ASTM D1321, and density at 25°C of 0.92 0.99 by ASTM D1298.

- 18. (Amended) The laminate film of claim 1, wherein said ethylene copolymer wax has a molecular weight of 500 3000, a melting point of 90 120°C by ASTM D127, viscosity at 99°C of 58 120 SSU by ASTM D 88, needle penetration at 25°C of 13.0 2.0 dmm by ASTM 1321 and average branches per molecule of 0.5 4.0.
- 20. (Amended) The laminate film of claim 1, wherein said hydroxyl-terminated polyethylene wax has a molecular weight of 375 700, a melting point of 78 105°C by ASTM D127, a viscosity at 149°C of 2.0 10.0 centipoise by ASTM D3236, needle penetration at 25°C of 10.0 1.5 dmm by ASTM 1321, density at 25°C of 0.95 0.96 by ASTM D792, and hydroxyl number of 127 65 mg KOH/g by ASTM D222.
- 22. (Amended) The laminate film of claim 1, wherein said carboxyl-terminated polyethylene wax has a molecular weight of 390 715, a melting point of 89 110°C by ASTM D127, viscosity at 149°C of 5.0 17.0 centipoise by ASTM D3236, needle penetration at 25°C of 9 1.5 dmm by ASTM 1321, and acid number of 115 63 mg KOH/g by BWM 3.01A.
- 23. (Amended) The laminate film of claim 11, wherein said heat-sealable layer or non-heat-sealable, winding layer has a thickness of about $0.5-5.0 \, \mu m$.
- 24. (Amended) The laminate film of claim 11, wherein said heat-sealable layer comprises a ternary ethylene-propylene-butene copolymer.
- 25. (Amended) The laminate film of claim 11, wherein said non-sealable, winding layer comprises crystalline polypropylene whose surface is roughened so as to produce a matte surface.
- 26. (Amended) The laminate film of claim 11, wherein said non-sealable, winding layer comprises a block copolymer blend of polypropylene and one or more other polymers whose surface is roughened so as to produce a matte surface.
- 27. (Amended) The laminate film of claim 11, wherein said non-sealable, winding layer is treated to provide a surface for lamination or coating with adhesives and/or inks.
